## Software Solution, Service for Telecom & Transmission Line towers.

IMI Software, a global software company established in 1988 is a Technology driven company dedicated to the development of Software for design of steel lattice structures (Telecom and Transmission Line Towers). Our Integrated Internet Application Utility, “iBASE”, is a intelligent information integration project management tool. iBASE can be customized for any organization to suit their business.

With its Strong background in Engineering, R &D and Integrated Internet Application Utility. Providing value-added software solutions & services for the Telecom and Power Industries in India and Abroad, IMI continues to play a key role, ushering in a paradigm shift in engineering methods and practices worldwide to make a business more competitive and efficient.

Our application Utility service enables online Control of Multi Location – Multi-Line to enable Project Management, Asset Management, Operations and Maintenance Management. The utility allows Management at every level within an organization, to have an instantaneous view of any project status, stretching from a global level to the minutes detail. This guarantees constant control and a thorough optimization of performance.

Our Telecom Infrastructures related services includes Building Structural analysis, Soil report verification services, Tower foundation Design, Tower foundation Audits (TFA) & Tower Acceptance Test (TAT), Proto Assembly Inspection and Fabrication Inspection.

- Minding the health of towers from Conception to Maintenance
- We are the pioneers and largest established consultants providing specialised services covering the entire life cycle of the tower.
